Street Address City Zip

Method of Election for 2013 Regular School Election (choose one)

- ☐ 1. All directors elected at-large by entire district.
- ☐ 2. School district is divided into single director or multi-director districts. Directors are elected at-large but directors must live in the single or multi-director districts.
- ☐ 3. School district is divided into single director or multi-director districts. No more than half of the directors are elected at-large; remaining directors are elected at-large but must live in the single or multi-director district.
- ☐ 4. School district is divided into single director or multi-director districts. Directors are elected by director district and directors must live in the director district.
- ☐ 5. School district has seven directors. Three directors are elected at-large, with no more than two elected at each regular school election. Four directors must live in the director district and are elected by director district, with no more than two elected at each regular school election.

Number of Directors (choose one)

- ☐ 1. Five Directors (no change)
- ☐ 2. Seven Directors (no change)
- ☐ 3. Increase to Seven Directors
- ☐ 4. Decrease to Five Directors

State of Iowa
School Redistricting Worksheet – District Population Certification

School District: _____

Ideal District Population

Divide the population of the school district by the number of director districts.

$$\frac{\text{School district population}}{\text{\# of director districts}} = \text{_____ ideal district pop.}$$

Important Note: A city cannot be divided into more than one director district unless the population of the portion of the city that is within the school district is greater than the ideal district population. If so, the city must be divided into the smallest number of director districts possible. [§275.23A(1)(b)]

District Size Comparison

Divide the population of the largest director district by the smallest director district.

$$\frac{\text{Largest district pop.}}{\text{Smallest district pop.}} = \text{_____}$$

This number must be 1.10 or less. Plans with variations exceeding that limit must include a justification that deviation is necessary to comply with the other legal requirements set forth in §275.23A and are highly likely to be rejected by the Secretary of State.

[IAC 721—21.31(275)]

Director District Variations

- Enter the population for each director district on the chart below.
- Compare each director district population with the ideal district population. Subtract the smaller population number of the two from the larger. List the difference in the "Variation" column.
- Total the populations of all director districts. The total must equal the census population for your school district.
- Total the variations for all director districts to determine the overall variation.

Director District	Population	Variation
1		
2		
3		
4		
5		
6		
7		
	= total population	= overall variation

I hereby certify that this is a complete and correct list of the director districts in this school district and that the population data included is correct.
